

Auto-QD

Charged Polymer Finish Dressing

Product Function:

Unique charged polymers suspend particulate matter to protect highly finished automotive paints from hologram scratching – safely cleans paintwork between washes. The high-shine imparted protects and beautifies paintwork, inhibits UV degradation and oxidization. Preserves previously applied last stage products (LSP) such as waxes and sealers. Water based and safe for all automotive paint finishes does not result in chemical build-up or dusty chalky residue. Effectively removes abrasive residue from polishing and paint correction processes. Can be used with auto-clay to impart a high-shine and lubrication in one and as a drying aid to prevent water-spotting in hard water areas

How to Use:

Adjust the strength of auto-QD to suit task at hand, use neat for maximum gloss, protection and cleaning. For less arduous tasks auto-qd maybe decanted and mixed 50/50 with water. Atomise auto-qd onto the surface and using the provided micro-fibre cloth folded into four, gently wipe the material across the surface. Use the other provided cloth also folded into four to buff to a high shine - no need to wait for curing.

As a drying aid or clay lube/gloss enhancer atomise onto already wet surface and wipe and buff with the micro fibre technique described above.
