

Hydra-Wax

Enhanced carnauba liquid wax

Product Function:

Hydra Wax is a superior easy-to-use last stage treatment for the protection of highly finished automobile paint systems. The high grade T1 carnauba wax is used as the backbone to provide a deep rich gloss, whilst unlike other automotive waxes excellent gloss, ease of application and buffability are provided by other gloss enhancing molecules.

How to Use:

Thoroughly wash vehicle with hot soapy water, only use salt-free automotive shampoos. Do not use wash and wax products. Dry vehicle using chamois leather, or synthetic equivalent.

Hydra Wax is **not** an abrasive polish, if your paintwork is faded, feels rough or has not been polished for a long period it will be necessary to use an abrasive polish and/or paint clay before application. Once prepared in this way regular application of Hydra Wax will maintain a high gloss finish without need for further use of abrasive polishes.

Shake well before use. If product has become too firm to shake, please stand bottle in three inches of hot water for five minutes with cap loosened. Re-tighten cap before shaking.

Work on shaded cool panels. Using the sponge applicator provided apply in light circular motions sparingly and allow to dull for approx 5-10 minutes. Buff to a high shine using the blue micro fibre cloth provided - turn frequently.

Both applicator pad and micro fibre cloth can be washed for re use. Do not use fabric conditioner.

Applicator pad should be stored away from direct sunlight.
