

How To Use Nanolex Nano One

This product can be stored for up to 24 months (in a dry, temperature stable environment)

Consumption:

appr. 7-10ml/m² (~35-50 ml for paint + rims)

Processing temperature: 5-30°C - Avoid direct sunlight and/or high air humidity.

IMPORTANT: Before you use a Nanolex Car Care product please make sure you wear suitable protection gear – we always recommend to use Latex- or Nitril gloves to make sure your hands are protected from any possible damage to your skin.

Nanolex Nano One can be applied directly to all lacquer surfaces. The surface must be dry and free of contamination or dust.

1. Nanolex Nano One should be applied applicator pad manually or with a dedicated orbital or rotary polishing machine to create a total but thin layer of coating. The surface must be covered completely. After drying excess material can be removed by simply wiping it off with a microfiber cloth.

2. Directly after polishing the sealant is dry and the surface can be touched. At normal ambient temperature the sealant is completely cured after approximately 60 minutes.

3. Cleaning treated surfaces

Please read the separate information on how to clean your car and wheels after a treatment with Nanolex Paint & Alloy Wheel sealants.

If you have any questions regarding our products or in case you need support during the application please feel free to get in touch with our staff any time.
